<i>Docket:</i>	45240-105719	}
<i>Examiner:</i>	Christopher M. Gross	}

DECLARATION UNDER 37 C.F.R. § 1.132

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

1. I, Krzysztof Darlak, am not a co-inventor of the patent application captioned above. I am an expert in peptide and peptide library syntheses. I have 25 years of experience in the field of peptide chemistry. When I was employed at Peptides International as Research Director I was the person who made the libraries that Dr. Anderson designed and directed the constructs of, and which he purchased from the company and as used in Dr. Anderson's patent application. I am currently employed as Senior Technical Manager of Chemical Operations at Creosalus, Inc.. My Resume is attached.
2. I have read the patent application captioned above.
3. I understand that the examiner does not believe that Dr. Anderson describes combinatorial libraries of D-peptides in his patent application, where the length of each

D-peptide is from three to seven D-amino acid residues, and where at least 68% of the D-peptides have at least 3 aromatic D-amino acid residues. I have read the patent application and I have read the document "Amendment and Response to Office Action Mailed April 2, 2009," and I understand and agree with the calculations of Dr. Anderson as described on pages 5, 6 and 7 of that latter document.

4. I understand that the examiner doubts that a person familiar with combinatorial libraries, such as me, could only make a pentapeptide library that satisfies the requirements in paragraph 3 in my Declaration, not libraries of different lengths of D-peptides, such as the tri-, tetra-, hexa- and hepta-peptide libraries.
5. With the information in Dr. Anderson's patent application, my knowledge, and in accordance with the information in Lebl et al., "One-Bead-One-Structure Combinatorial Libraries," cited in the patent application, I could make libraries of 3, 4, 5, 6 and 7 amino acids where at least 68% of the D-peptides have at least 3 aromatic D-amino acid residues.
6. The libraries of 3 to 7 amino acid residues would be made as follows all using the split synthesis method as described in Lebo et al.: the tri-peptide library would use the 3 aromatic D-amino acids of D-phenylalanine, D-tyrosine and D-tryptophan; the tetra-peptide library would use the 3 aromatic amino acids and either glycine or D-alanine; the penta-peptide library would use the 3 aromatic amino acids and glycine and D-alanine; likewise the hexa- and hepta-peptide libraries would use the same amino acids as the penta-peptide library. The resulting libraries would all contain at least 68% of all sequences having 3 or more of the aromatic amino acids listed above.
7. I believe that Dr. Anderson has made an important and unique discovery that short peptide sequences containing 3 or more aromatic amino acids can display the properties of high affinities and specificities to many proteins of biologic and medical interest, and that such peptides will find many applications in diagnostic and therapeutic uses. The combinatorial libraries he describes is an efficient experimental approach to identifying such aromatic rich peptide sequences.
8. I hereby declare that all statements made herein are of my own knowledge, and that all statements are made on information believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are

punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code, and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'K. Darlak', with a stylized flourish at the end.

Name: Krzysztof Darlak

Title: Senior Technical Manager

Date: August 28, 2009

Krzysztof Darlak

Career summary

Versatile, motivating, hands-on technical leader/ organic chemist with a strong emphasis on both solid and solution phase peptide synthesis with extensive experience in Research and Product Development.

Professional Experience

Positions and Employment

2009-present Senior Technical Manager of Chemical Applications, Creosalus, Inc., Louisville, KY
1992-2009 Research Director, Peptides International, Inc., Louisville, KY
1991-1992 Senior Chemist, Peptides International, Inc., Louisville, KY

- Built the research and chemical production department from the ground up at Peptides International Inc., a supplier of high quality building blocks, resins, reagents and custom & catalog peptides.
- Directed research, development and synthesis of the new catalog and custom products.
- Supervised up to five directly reporting chemists, including Ph.D. level chemists.
- Identified new technologies and new classes of compounds via its licensing or collaborations and its development into new products.
- Responsible for designing and outfitting a new research and production facility which was built and became fully operational in 2007.
- Provided customer support for all manufactured products and helped in solving customer's synthetic challenges.
- Direct involvement in all aspects of synthesis, scale up, purification and analysis of manufactured products covering the following but not limited to:
 - Synthesis of unusual building blocks for peptide synthesis (diamino acids, tics, mercaptoacids, pegs etc.)
 - Preparation of the resins for peptide synthesis: functionalization and derivatization of the polystyrene based beads (Merrifield, PAM, MBHA, Wang and others); design, development and scale-up preparation of the beaded polymers via suspension polymerization.
 - Design, development and scale-up of polymer supported reagent Clear-OX, a versatile tool in preparation of disulfide bridged peptides.
 - Solid Phase Peptide Synthesis up via either t-Boc or Fmoc methodologies, solution peptide synthesis or combination of both involving linear, branched and cyclic peptides (lactam, disulfide), phosphonopeptides, lipopeptides, pegylated and biotinylated peptides, Dye-labeled peptides (AMC, pNA, fluorescein, rhodamines, cyanines, Dnp/Amc and others FRET pairs), C-terminally modified

- peptides (aldehydes, alcohols, N-alkyl amides), peptide bond modified peptides ($\Psi[\text{CH}_2\text{S}]$, $\Psi[\text{COO}]$, $\Psi[\text{CH}_2\text{NH}]$), up to 100g scale
- Combinatorial peptide synthesis; preparation of soluble and solid support libraries, utilization of unusual resins.
 - Other skills: mass spectrometry, ran and maintained Applied Biosystems Mariner (ES-MS), HPLC, FT-IR, UV-VIS, polarimeter, large scale HPLC purification systems (NovaSep, up to 110 mm dia. columns), large scale solid phase peptide synthesis (50 L), large scale evaporators (20 L), large scale solution synthesis (100 L reactors).

Academic Appointments

1988-1990 Senior Postdoctoral Research Associate, Dept. of Chemistry, University of Louisville, Louisville, KY

1985-1987 Postdoctoral Research Associate, Dept. of Chemistry, University of Louisville, Louisville, KY

1984-1988 Assistant Professor, Institute of Chemistry, University of Gdansk, Gdansk, Poland

1984-1984 Postdoctoral Research Associate, Institute of Pharm. Chemistry, University of Ferrara, Ferrara, Italy

1981-1984 Research Assistant, Institute of Chemistry, University of Gdansk, Gdansk, Poland

Education

1981 M.S. Organic Chemistry (with honors), University of Gdansk, Gdansk, Poland

1984 Ph.D. Organic Chemistry, Prof. Zbigniew Grzonka University of Gdansk, Gdansk, Poland

Other Experience and Professional Membership

American Peptide Society

European Peptide Society
